

and certainly not like anything on Cape Cod. In answer to my inquiries I was informed that a few years before a Wareham schooner had brought back from Chesapeake Bay a ballast load of gravel which had been used on the sandy road at this part to make a better highway. Almost all gravel transportation is by railroad and for comparatively short distances, but when brought in schooner loads from a southern shore we may certainly expect new plants and animals to be concealed in it.—G. G. KENNEDY, Readville, Massachusetts.

SOME PLANTS OF INTERVALE, NEW HAMPSHIRE.—It may interest the readers of RHODORA to know that in August of the years 1889 and 1890 *Pogonia pendula* was found at Intervale, New Hampshire. It grew not very plentifully in two or three very limited areas under beech trees, often pushing up through the beech leaves and carrying them like an unwieldy collar at a little distance below the flowers. Since the years mentioned I have not been in Intervale during the month of August and have no means of knowing whether this orchid still grows there.

Along a railway cutting through a sand bank at Intervale, there is always to be found a quantity of *Polygonella articulata*,—a station unusually far inland and also marking perhaps the northern limit of this species in New England.

*Hudsonia tomentosa* grows plentifully among sand and pebbles in abandoned beds of the Saco along the road to Echo Lake, or in bottoms subject to overflow, and has increased noticeably in the last ten years. From the Gray Herbarium I learn that this is the *Hudsonia* secured at Intervale some years ago by Miss Susan Minns. Her plant was correctly determined as *H. tomentosa* by the late Dr. Sereno Watson and is so labeled in the Gray Herbarium, but by some clerical error it was recorded in the 6th edition of Gray's Manual as *H. ericoides* and this mistake was repeated in the Synoptical Flora.

I have also found *Paronychia argyrocoma* on sand bars of the Saco near Humphrey's Ledge at Intervale.—FRANCES C. PRINCE, Boston, Massachusetts.

THE "KING-DEVIL WEED" IN THE PENOBSCOT VALLEY. — I am not aware that *Hieracium praealtum* has been recorded from this part of Maine, and if not the following record may be of interest. On June
